

Concrete drill bit SDS Plus II Pointer V

Steel drill bit for two-edged hammers for faster drilling with SDS Plus attachment.

-
-
-

For punctures conforming to certifications in:

- Concrete
- Masonry

Also suitable for:

- Natural stone

- The optimised tip geometry allows fast drilling, reduced wear and tear, and less effort.
- The centering tip allows easy and precise drilling and prevents slippage on smooth surfaces.
- The 3 "Power Breakers" on the head of the tip have a "pulverizing effect". They create micro-fractures in the material and allow a significantly improved drilling speed.
- Larger reinforcement chamfers (+35%) ensure that the tip acts in the best possible way when it hits the reinforcement bars in the concrete. This significantly reduces the risk of problems caused by tip jams.
- The new Vario KVS propeller offers additional advantages: the reduced crown width behind the tip head reduces friction and ensures a more powerful energy transfer during percussion drilling. The improved propeller allows an ideal transport of drilling residues. The spiral shape increases stability and, with it, breaking resistance.
- Thanks to the special SDS Plus connection, the SOMEBODY 8 version is ideal for holes close to the masonry edge. Especially suitable for the fastening of insulation materials.

Punta SDS Plus II Pointer V
