# SDS Plus II 8/100/400 Masonry

Drill bit for installing plugs for insulation with faster and more precise drilling on brick.

## Ideal for drilling in:

Masonry drilling.

# Also suitable for:

Full masonry.

Autoclaved aerated concrete (cellular

Plasterboard.

#### Can be used with:

Hammers and drills with SDS-

More information about supporting

materials, etc. can be found in the technical documentation.

## **ADVANTAGES**

- · Quick drilling.
- Ideal for not damaging hollow bricks.
- Short stroke SDS coupling to reduce the impact in use with rotopercussion on hollow bricks.
- Guarantees punctures of precise lengths thanks to the rubber ring.
- · Long life in time.

# **CHARACTERISTICS**

- · Ideal for the installation of hardware for external thermal insulation systems.
- 400 mm total length to safely cross coat and masonry.
- Centering tip with two cutting edges for fast and precise drilling.
- Metal tip head with sharp carbide plate.
- · Special SDS attack to reduce percussion on brick.
- Perfect holes also in perforated bricks.

Masonry tip with SDS connection, ideal for installation of insulation dowels. Perfect holes also in perforated bricks.
